Other Site Characteristics

L'area comprende il tratto di litorale adriatico tra Ancona e Sirolo e le zone collinari retrostanti. La falesia calcarea e la falesia marnoso arenacea sono sottoposte alla forte azione erosiva del mare che determina movimenti franosi.

4.2 Quality and importance

Il promontorio del Conero rappresenta un punto di riferimento per gli uccelli migratori e per l'importanza biogeografica per la distribuzione delle specie vegetali: infatti rappresenta il limite meridionale e settentrionale di diffusione per molte specie vegetali sia erbacee che arbustive.

4.3 Threats, pressures and activities with impacts on the site
